OIL CONSERVATION COMMISSION,
Santa Fe, New Mexico.

Gentlemen:

Following is a notice of intention to do certain work as described below at the

Gulf Oil Corporation W. Grimes Well No. 14 in SW SW
Company or Operator Lease
of Sec. 32, T. 18S, R. 38E, N. M. P. M., Bowers Field.
Lea County.

FULL DETAILS OF PROPOSED PLAN OF WORK**FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION**

In the course of drilling, the well blew out violently at a depth of 1950' and produced air at an estimated volume of 275,000 MCF. After the air exhausted, drilling was resumed and the hole was deepened to 2600' but satisfactory circulation was never regained. An attempt to run casing at that depth was unsuccessful because hole repeatedly bridged as a result of red bed caving.

It is proposed to abandon the hole at 2600' and plug by spotting cement through drill pipe (using Halliburton) at a point below bottom of surface casing, which is set at 313' and use sufficient cement to bring it up into surface casing. It is further proposed that the location be changed and a new hole started 990' from South Line and 990' from West Line of Section 32-18S-38E, Lea County, New Mexico, this being in the same 40 acre tract.

The casing program on the new hole located 990' from South Line and 990' from West Line of Section 32 is to be 9-5/8" surface casing and 7" oil string to be set at same approximate depth as original well on this 40 acre tract.
