The San Andres formation is exposed through perforations 4136-4144'. Gas is evidently channeling behind 5" O.D. production casing. Plan to perforate at 4100' and spot 10 sacks cement then perforate at 4062' and squeeze cement w/75 sacks cement in effort to shut off gas. In the event this fails, it is planned to perforate for production from 4176-4192' and from 4198-4202' set a packer between 4144 and 4176', test and treat with 500 gallons of acid if warranted.
