OFFICE OF THE STATE GEOLOGIST  
SANTA FE, NEW MEXICO

## MISCELLANEOUS REPORTS ON WELLS

Submit this report in duplicate to the State Geologist or proper Oil and Gas Inspector within ten days after the work specified is completed. It should be signed and sworn to before a notary public for reports on beginning drilling operations, results of shooting well, results of test of water shut-off, result of abandonment of well, and other important operations, even though the work was witnessed by the State Geologist or Oil and Gas Inspector. Reports on minor operations need not be signed and sworn to before a notary public, but such operations should be witnessed by an Oil and Gas Inspector if possible.

Indicate nature of report by checking below:

REPORT ON BEGINNING DRILLING OPERATIONS	REPORT ON DEEPENING WELL
REPORT ON RESULT OF SHOOTING WELL	REPORT ON PULLING OR OTHERWISE ALTERING CASING
REPORT ON RESULT OF TEST OF WATER SHUT-OFF	REPORT ON REPAIRING WELL
REPORT ON RESULT OF ABANDONMENT OF WELL	<b>REPORT ON ACID TREATMENT</b>
	<b>X</b>

Hobbs, New Mexico      March 23, 1934

Mr. E. H. Wells State Geologist,

Santa Fe, N. Mex.

Following is a report on the work done and the results obtained under the heading noted above at the Stamelin Oil & Gas Company Turner Well No. III in the

SE 1/4 of Sec. 34, T. 19 S, R. 22 E, N. M. P. M.,  
Hobbs Oil Field, Lea County.

The dates of this work were as follows: Acid treatment on March 10, 1934

Notice of intention to do the work was (~~was~~) submitted on Form SG 105 on February 2, 19 34, and approval of the proposed plan was (~~was~~) obtained. (Cross out incorrect words.)

### DETAILED ACCOUNT OF WORK DONE AND RESULTS OBTAINED

Well was treated with 2,000 gallons 20% commercial Hydrochloric acid solution on March 10th. The well was shut in and left shut in for forty eight hours, until March 12th, when it was swabbed in. The well was then allowed to flow at its production allowable until the official production test which was made on March 22nd. The potential before acid treatment was 1435 barrels of oil with 1,135,000 cubic feet of gas. After acid treatment the potential is 2250 barrels of oil with 3,700,000 cubic feet of gas, an increase of 57%. Open flow test through tubing on production test was 2255 barrels, which placed on tubing-casing curve gave the well a new potential of 2250 barrels for open flow.

## DUPLICATE

Subscribed and sworn to before me this

23rd day of March, 19 34.

*[Signature]*

NOTARY PUBLIC.

My commission expires October 17th, 1934

Remarks:

I hereby swear or affirm that the information given above is true and correct.
