"Carper-Lien"

November 12, 1958

Well No. 1 is located 660 ft. from {N} line and 1980 ft. from {W} line of sec. 31
formerly #1-2012
NE/4 NW/4 31 17 S 33 E NMP
 (1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Maljamar Lee New Mexico
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 4002 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Operations were commenced on August 29, 1958 with company cable tools. The hole was cleaned out to 3345' where the top of the old 5 1/2" casing was found. The hole bailed dry at 3345. In an attempt to get into the old 5 1/2" casing, a casing surge was run into the hole. The surge stuck in the 8 5/8" casing at 200 feet. A total of 20 days were spent trying to get the surge loose but all attempts to get the fish loose failed.

The 8 5/8" casing was filled with cement from the fish at 200' back to the surface and a marker was placed in cement in the top of the 8 5/8" casing.

The hole was junked and abandoned August 29, 1958.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
