Re: VGSAU #31-J, Sec. 2, T18S, R34E

Dear Mr. Henley:

I have received and reviewed your request to set the packer in the above referenced injection well at a depth of 4167 feet.

In consultation with Paul Kautz, the OCD Geologist, it has been determined that the packer set at this depth will contain injected fluids to the Grayburg and/or San Andres formations.

You may set the packer at this depth and resume injection into the well as soon as all workover procedures are completed and a satisfactory pressure test is conducted, confirming the success of the repairs.

We request that you submit the pressure chart and a sundry notice (C-103) outlining all procedures utilized to bring the well into compliance with OCD standards.

Very truly yours
