Re: Central Vacuum Unit #133-B, Sec. 12, T18S, R34E

Dear Mr. Duncan:

I have taken under advisement your request to set the packer in the above referenced injection well at 4377 feet.

The research by Paul Kautz confirms that the packer, set at 4377, is still in the approved injection interval, which consists of the Grayburg and San Andres formations.

You are granted approval to set the packer at the requested depth and resume using the well for injection purposes.

We request that you submit a sundry notice listing all procedures utilized in the repairs and the original chart, confirming the success of the repairs.

Very truly yours

OIL CONSERVATION DIVISION
