There have been no changes in the well. A small pumping unit was placed on this well in December 1999 to try to skim oil from the well at 1000' without producing large volumes of water. Production in December 1999 was 256 BO + 10 BW. We are still skimming oil by pumping it periodically each month.

I hereby certify that the information above is true and complete to the best of my knowledge and belief.
