The Federal CS Well No. 1 was drilled and completed in the Penrose (Lower Queen) sand during 1981 by C. W. Stumhoffer. It was produced from the Penrose sand until September, 1999.

Although the Penrose sand was still productive during September, 1999, a bridge plug was set at 4690' (above Penrose sand perforations) in order to test the Main Zone of the Upper Queen.

The Main Zone of the Upper Queen was perforated from 4476' to 4494', acidized, fracture treated and tested for productivity. On production test from October 1 to 4, 1999, the Main Zone of the Upper Queen averaged 4 BOPD and 80 BWPD with no test on gas production.
