

6. MUD PROGRAM:

- 0 to 350': Fresh water with lime or gel as needed for viscosity control.
- 350' to 3000': Brine conditioned as necessary for viscosity control and safe hole conditions.
- 3000' to 9900': Water base drilling fluid conditioned as necessary for control of viscosity, ph, and water-loss. Weighted as required for well control.

7. AUXILIARY EQUIPMENT: Drill string safety valves will be maintained on the rig floor while drilling operations are in progress.

8. TESTING, LOGGING, AND CORING:

Drill stem tests will be made when samples, drilling time and other data indicate a test is warranted.

It is planned that electric logs will include Gamma Ray-CNL, FDC logs and dual laterologs.

No coring is planned.

9. ABNORMAL PRESSURES, TEMPERATURES, OR HYDROGEN SULFIDE GAS:

No abnormal pressures or temperatures are anticipated.

10. ANTICIPATED STARTING DATE:

It is planned to commence drilling operations on or before March 31, 1987.
