

The diagram illustrates a wellhead assembly. On the left, a vertical pipe (wellbore) enters a horizontal section. This section contains an 'ANNULAR PREVENTER' (a large rectangular block) followed by a smaller rectangular block. To the right of this is an 'R-BLIND RAMS' section, consisting of two stacked horizontal bars. Further right is an 'R-PIPE RAMS' section, also consisting of two stacked horizontal bars. To the right of this is a 'DRILLING SPOOL' section, which is a vertical pipe with a flange at the top. The flow path is indicated by arrows pointing from left to right through the assembly.
