(State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is proposed that this well be drilled to a depth of 3900' to test the Queen formation of the Young pool. 8-5/8" OD casing will be set at approximately 1000' and cemented to surface. 5-1/2" OD casing will be set at total depth and the pay section will be selectively perforated and tested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Company Buffalo Oil Company

Address 203 Carper Building
