Tonto      Lea      New Mexico  
(Field)      (County or Subdivision)      (State or Territory)The elevation of the derrick floor above sea level is 3635 ft.

## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well was drilled to 3593' without encountering oil or gas production and has been completed as a water well at a zone from 700' to 810' in the following manner. The bottom of the hole was plugged with 30 sacks of cement from 3593' to 3353'. Hole was filled with heavy mud, and 5-1/2" casing was parted and pulled at 2050', spotting a 20-sack cement plug from 2080' to 2000'. The bottom of the 8-5/8" casing was plugged with 25 sacks of cement from 1470' to 1370', perforating the 8-5/8" casing through the fresh water zone from 810' to 700' with 220 holes. Above work was completed on 11-29-44 and the well is now ready for inspection.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
