

NEW MEXICO OIL CONSERVATION COMMISSION

Santa Fe, New Mexico

MISCELLANEOUS NOTICES

Submit this notice in triplicate to the Oil Conservation Commission or its proper agent before the work specified is to begin. A copy will be returned to the sender on which will be given the approval, with any modifications considered advisable, or the rejection by the Commission or agent, of the plan submitted. The plan as approved should be followed, and work should not begin until approval is obtained. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of notice by checking below:

NOTICE OF INTENTION TO TEST CASING SHUT-OFF	<input checked="" type="checkbox"/>	NOTICE OF INTENTION TO SHOOT OR CHEMICALLY TREAT WELL	
NOTICE OF INTENTION TO CHANGE PLANS		NOTICE OF INTENTION TO PULL OR OTHERWISE ALTER CASING	
NOTICE OF INTENTION TO REPAIR WELL		NOTICE OF INTENTION TO PLUG WELL	
NOTICE OF INTENTION TO DEEPEN WELL			

Midland, Texas

November 9, 1938

Place

Date

OIL CONSERVATION COMMISSION,
Santa Fe, New Mexico.

Gentlemen:

Following is a notice of intention to do certain work as described below at the

Phillips Petroleum Company Mable

Company or Operator

Lease

Well No. 1 in NW/4

of Sec. 35, T. 17-S, R. 34-E, N. M. P. M., Vacuum Field,
Lea County.

FULL DETAILS OF PROPOSED PLAN OF WORK

FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

T. D. 4185 Line. Set 7" OD casing at 4171' n 7" and cemented with 400 sacks.

Test for casing shut-off to be made 9:30 PM November 11, 1938.

NOV 12 1938

Approved November, 1938
except as follows:

Phillips Petroleum Company

Company or Operator

By

Position

District Superintendent

Send communications regarding well to

Name

Earl Griffin

Address

Box 1390, Midland, Texas

OIL CONSERVATION COMMISSION,

By

Title

OIL & GAS INSPECTOR

The first part of the paper discusses the importance of understanding the underlying mechanisms of the system. It is argued that a thorough understanding of the system's components and their interactions is essential for developing effective control strategies. This involves a detailed analysis of the system's structure, including the identification of key variables and the relationships between them. The second part of the paper presents a series of experiments designed to test the proposed control strategy. These experiments involve the application of various control parameters and the measurement of the system's response. The results of these experiments are presented in a series of plots, which show the system's behavior under different conditions. The third part of the paper discusses the implications of these results for the design of control systems. It is concluded that the proposed control strategy is effective in achieving the desired system behavior, and that it can be used as a basis for the design of more complex control systems.
