Re: Central Vacuum Unit #91-N, 36-17-34

Gentlemen:

We have received the C-103 regarding the unsuccessful attempt to retrieve the tubing and pump and from the above referenced well and converting it to a monitor well. From the C-103, I cannot tell if the San Andres was plugged off. Please clarify this. If it was not plugged off, please set up a meeting so we can discuss whether this well should be a monitor well.

Very truly yours
