### DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is intended to drill with rotary to an approximate depth of 4700' to test the Queen formation.

Casing program as follows: 8-5/8" at 250' cemented with 250 sacks or sufficient amount to circulate to surface.

If commercial production is indicated, approval of the U. S. G. S. will be obtained before production casing is run and cemented.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
