## FULL DETAILS OF PROPOSED PLAN OF WORK

FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

Well is now bailing less than one barrel of oil per day. We now propose to test zone where a show of oil was logged at 4688-4715'. We propose to shoot with 115 quarts of LNG, using 4" shells from 4669 to 4700' and 2½" shells from 4700 to 4742'. We will use a Calseal plug on top of the shot in order to protect the casing. The work will be done on January 6th.

If we obtain a satisfactory amount of oil from the shot, we propose to selectively acidize this upper zone, by stages.
