

NEW MEXICO OIL CONSERVATION COMMISSION

Santa Fe, New Mexico

MISCELLANEOUS REPORTS ON WELL

Submit this report in triplicate to the Oil Conservation Commission or its proper agent within ten days after the work specified is completed. It should be signed and sworn to before a notary public for reports on beginning drilling operations, results of shooting well, results of test of casing shut-offs, result of plugging of well, and other important operations, even though the work was witnessed by an agent of the commission. Reports on minor operations need not be signed and sworn to before a notary public. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of report by checking below:

REPORT ON BEGINNING DRILLING OPERATIONS		REPORT ON REPAIRING WELL	
REPORT ON RESULT OF SHOOTING OR CHEMICAL TREATMENT OF WELL		REPORT ON PULLING OR OTHERWISE ALTERING CASING	
REPORT ON RESULT OF TEST OF CASING SHUT-OFF	<input checked="" type="checkbox"/>	REPORT ON DEEPENING WELL	
REPORT ON RESULT OF PLUGGING OF WELL

Name

Oil & Gas Inspector

Title

THEORY OF THE EARTH

CHAPTER I

THE EARTH AND ITS HISTORY

The Earth is a planet of the solar system, and its history is the history of the solar system. The solar system is a system of celestial bodies, including the Sun, the planets, and the moons, which are held together by the force of gravity. The Sun is the central body of the solar system, and the planets revolve around it in elliptical orbits. The moons revolve around the planets. The history of the solar system is the history of the formation and evolution of these celestial bodies.

THE FORMATION OF THE EARTH

The Earth is believed to have formed about 4.5 billion years ago. It is thought that the solar system formed from a cloud of gas and dust, called a nebula. The nebula collapsed under the force of gravity, and the material in the center of the cloud gathered together to form the Sun. The material in the outer parts of the cloud formed a disk, called a protoplanetary disk. The protoplanetary disk is the region where the planets and moons form. The Earth formed from the protoplanetary disk, and its history is the history of the formation and evolution of the Earth.

THE EARTH'S HISTORY

The Earth's history is the history of the formation and evolution of the Earth. It is the history of the changes that have taken place on the Earth since it was first formed. The Earth's history is divided into three main periods: the Pre-Cambrian period, the Cambrian period, and the Post-Cambrian period. The Pre-Cambrian period is the earliest period of Earth's history, and it is the period when the Earth was first formed. The Cambrian period is the period when life first appeared on the Earth. The Post-Cambrian period is the period when the Earth's history is most well known, and it is the period when the Earth's history is most well documented.
