THE UNIVERSITY OF CHICAGO
DIVISION OF THE PHYSICAL SCIENCES

REPORT OF THE COMMITTEE ON THE
PROGRESS OF THE PHYSICAL SCIENCES

The Committee on the Progress of the Physical Sciences was organized in 1946 to study the progress of the physical sciences in the United States and to make recommendations to the National Science Foundation. The Committee has held several public hearings and has received many suggestions from scientists and the public. The Committee has also conducted extensive research into the various fields of the physical sciences and has prepared this report as a summary of its findings and recommendations.

The Committee has found that the physical sciences in the United States are in a state of rapid growth and development. There has been a significant increase in the number of scientists and the amount of research funding. However, the Committee has also found that there are still many areas where research is needed and that the current system of funding and organization of research is not always the most effective. The Committee has made several recommendations to improve the system and to encourage further research.

The Committee has also found that there is a need for more communication between scientists and the public. The Committee has recommended that the National Science Foundation should establish a program of public information and that scientists should be encouraged to write for the general public. The Committee has also recommended that the government should support the development of new scientific instruments and facilities.

The Committee has found that the physical sciences in the United States are in a state of rapid growth and development. There has been a significant increase in the number of scientists and the amount of research funding. However, the Committee has also found that there are still many areas where research is needed and that the current system of funding and organization of research is not always the most effective.
