FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

In order to stimulate production, it is our intention to set a Sweet packer at 4875' for selectively acidizing the pay interval. The interval above the packer, 4663-4875', will be treated with 5,000 gallons, and the interval below the packer, 4875-4985', with 3,000 gallons of 15% regular acid. A blanket will be placed from 4985' to T.D. 5,020' in order to preclude the possibility of acidizing into water.
