This is a Report of: (Check appropriate block) ☐ Results of Test of Casing Shut-off
☐ Beginning Drilling Operations ☐ Remedial Work
☐ Plugging ☒ Other Eliminate pressure communication in wellhead.

Detailed account of work done, nature and quantity of materials used and results obtained.

During casing leak survey in West Lovington Field leak was indicated to exist in 8-5/8" intermediate casing by blow down tests conducted. On January 14, 1958, wellhead was tightened to eliminate pressure communication between intermediate and surface annuli. After work performed, pressure on intermediate annulus was 66 psi, while pressure on surface annulus was 16 psi. Bled intermediate down to zero psi in 24 minutes while surface casing dropped to 14 psi and remained constant. Tightening wellhead considered sufficient to eliminate communication between casing strings.
