FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

This well was completed 5-30-45 at a total depth of 5175 ft. It now flows at a rate of approximately 80 BOPD, but dies frequently. We propose to acidize in two stages with 1500 and 3500 gallons of HCL respectively, from 4717 to 5175. In this manner, we hope to secure more satisfactory flowing conditions.
