THEORY OF THE EARTH

CHAPTER I

OF THE ORIGIN OF THE EARTH

The origin of the earth is a subject which has attracted the attention of philosophers and naturalists from the earliest times. The ancients were divided into two main schools of opinion. The one school, which was the more numerous, held that the earth was created out of nothing, and that the elements were separated from each other by the action of fire. The other school, which was the less numerous, held that the earth was created out of pre-existing matter, and that the elements were separated from each other by the action of water. The former school was the more popular, and the latter the more philosophical. The former school was the more popular, and the latter the more philosophical. The former school was the more popular, and the latter the more philosophical.
