Re: Young No. 2 A 19-18-32  
Lea County, New Mexico

Gentlemen:

On August 30, 1956, we engaged a well servicing company to do some work on our Young No. 2 A Well in Lea County, New Mexico.

During the course of this work, the rods were pulled, a new pump was installed and some twenty to thirty barrels of fresh water was run into the well. The rods were then rerun and the well again placed in condition for production.

This work was done in order to improve the pumping efficiency of the well. The well is presently being tested and is expected that pumping efficiency will have improved to our satisfaction. If, however, the results are not entirely satisfactory, we expect to take other steps to maintain the pumping efficiency.

Yours very truly,

MINNTEX OIL COMPANY
