April 29, 1960

Young
Well No. 3 is located 1980 ft. from [N] line and 660 ft. from [E] line of sec. 20
SW/4 NW/4 Sec. 20 18S 32E NMPN
(4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Young Lea New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3733 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Propose to clean out to original total depth of 3776 feet with cable tools and deepen with cable tools to the Penrose (Queen) formation to an approximate total depth of 4050 feet. If pay is present in the Penrose this zone will probably be fraced.

Well is presently producing from the Artesia Red Sand (Queen) at a depth of 3741 to 3760 feet and is making about two barrels of oil per day.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
