### DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well has been restored to production in paying quantities by setting packer at 3464 feet, and bridging off perforations in the Seven Rivers zone from 3480-3490', thus eliminating excessive water.

Production from the Yates from 3400-15 and 3430-45 is estimated at approximately 2000 MCF of gas per day. Shut in pressure 1250 PSI. Well is now producing on 1/4" Coke at 700 Lbs. at the rate of 750 MCF per day.

Work and tests complete 3/1/65.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
