Re: Requested Revision to
Application for Triple
Completion, TEXACO Inc.,
State of New Mexico "O"
(NCT-1) Well No. 17, Lea
County, New Mexico

Attention: Mr. A. L. Porter, Jr.

Gentlemen:

TEXACO Inc. respectfully requests revisions to the casing and cementing program proposed in Application for Triple Completion, TEXACO Inc., State of New Mexico "C" (NCT-1) Well No. 14, Lea County, approved by Administrative Order No. MC-1312. The requested change is to use 3-1/2 inch casing and 1-1/2 inch tubing in place of 4-1/2 inch casing and 2-3/8 inch tubing for producing the Devonian and to set the 2-7/8 inch Wolfcamp casing string at approximately 10,800 feet instead of at 10,500 feet. The 2-7/8 inch Pennsylvanian casing string is to be set at 10,800 feet as initially proposed. Instead of cementing down 4-1/2 inch casing only and using a two-stage cementing tool, TEXACO Inc. desires to cement down the 3-1/2 inch casing with 450 sacks of Class "C" neat cement for the first stage and down both 2-7/8 inch casing strings with 1750 sacks of Class "C", 4% gel, cement for the second stage.

A favorable reply to this request shall be appreciated. A revised diagrammatic sketch is attached and a

1. *Chlorophyll a* and *Chlorophyll b* were determined by the method of Arar and Collins (1971).

Figure 1 is a line graph titled "Percentage of total population in the labor force by age group, 1970-1990". The vertical axis (Y-axis) is labeled "Percentage of total population in the labor force" and ranges from 0 to 100 in increments of 10. The horizontal axis (X-axis) is labeled "Year" and ranges from 1970 to 1990 in increments of 10. There are six data series representing different age groups: 15-24, 25-34, 35-44, 45-54, 55-64, and 65+. The 15-24 age group starts at approximately 25% in 1970 and declines steadily to about 15% in 1990. The 25-34 age group starts at approximately 15% in 1970 and rises slightly to about 20% in 1990. The 35-44 age group starts at approximately 10% in 1970 and rises slightly to about 15% in 1990. The 45-54 age group starts at approximately 5% in 1970 and rises slightly to about 10% in 1990. The 55-64 age group starts at approximately 2% in 1970 and rises slightly to about 5% in 1990. The 65+ age group starts at approximately 1% in 1970 and rises slightly to about 2% in 1990.

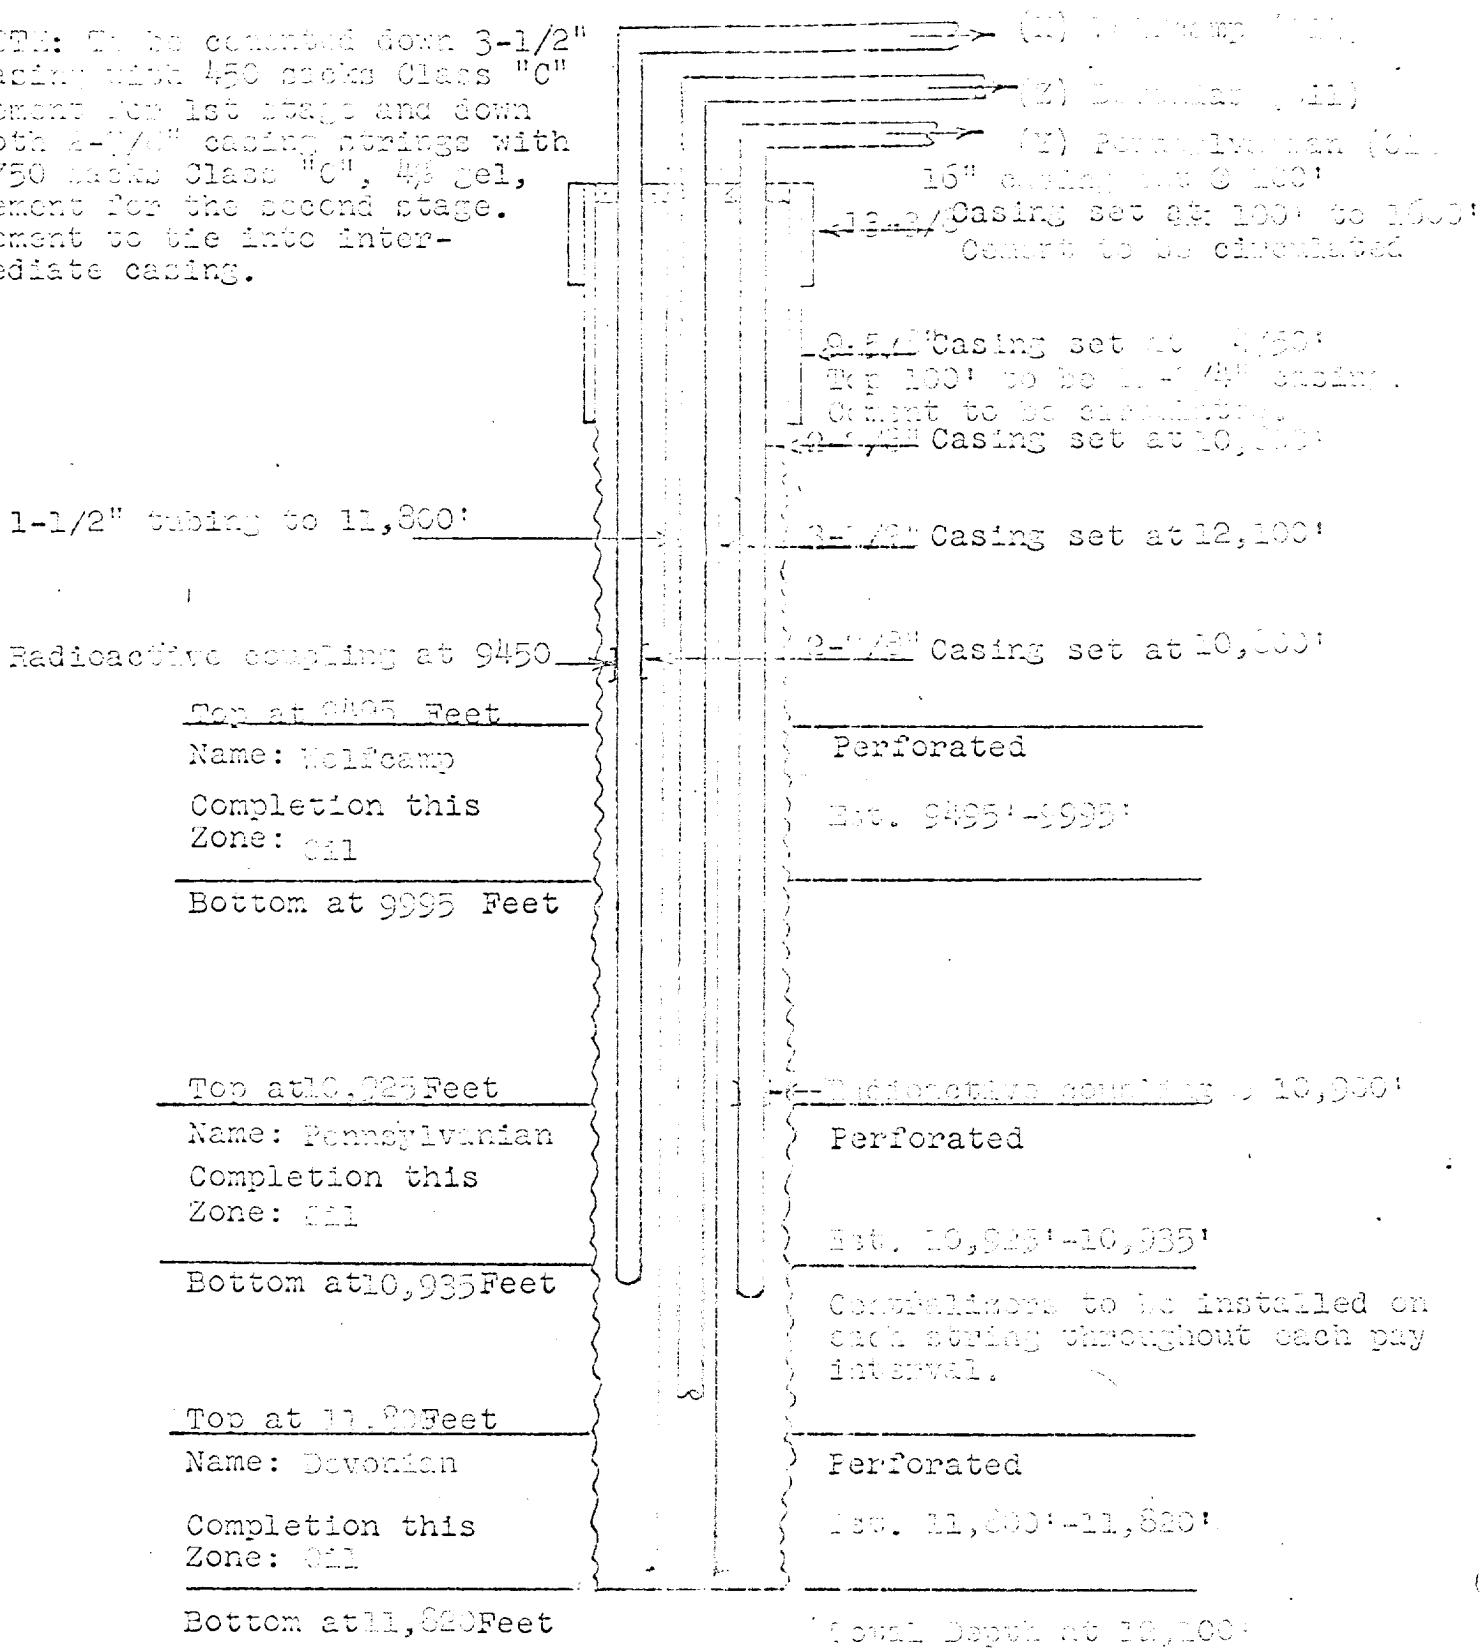

6

1. *Chlorophyll a* and *Chlorophyll b* were determined by the method of Arar and Collins (1971) using a Shimadzu 1601 UV-Visible Spectrophotometer. The concentration of chlorophylls was expressed in mg/L.
