DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On Oct. 23, 1963, perforations at 2678-94 were fraced with 500 gallons 19% acid plus 10,000 gallons refined oil plus 5,000 sand plus 2,500 glass beads. Formation broke at 2700 psi. and treated at 3400 psi. at 13 barrels per minute. After recovering lead oil, the well swabbed 45 barrels of oil in 24 hours.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
