Re: Revision of Administrative
Order No. MC-1515, TEXACO
Inc. State of New Mexico
"N" Well No. 6, Lea County,
New Mexico

Attention: Mr. A. L. Porter, Jr.

Gentlemen:

TEXACO Inc. respectfully requests that Administrative Order No. MC-1515 be revised to the effect for authorization of triple completion of State of New Mexico "N" Well No. 6 located in Unit L of Section 30, Township 17 South, Range 35 East, NMPM, Lea County, New Mexico, in such a manner as to produce oil from the Vacuum Glorieta Pool, Vacuum North Abo Pool and Vacuum Wolfcamp Pool through parallel strings of 2-7/8 inch casing cemented in a common well bore. These pools are requested, instead of the Blinebry, Wolfcamp and North Abo Pools, as provided for in Order No. MC-1515, due to the fact that the Blinebry Pool was not commercially productive during completion attempts. The Glorieta Pool was completed in the respective casing string in which completion attempts were conducted in the Blinebry Pool.

Authorization for the triple completion of a well in the Glorieta, North Abo and Wolfcamp pools was previously granted by the New Mexico Oil Conservation Commission in Phillips Petroleum Corporation Santa Fe Well No. 87. Please find attached a revised diagrammatic sketch of State of New Mexico "N" Well No. 6 zone segregation test results and bottom-hole pressure test results. Electrical log survey was submitted

Division of Administration
Order No. MC-1515, TRWACO
Inc. State of New Mexico
"W" Well No. 1, Lea County,
New Mexico

Attention: Mr. A. L. Portner, Jr.

Re: TRWACO

TRWACO Inc. respectfully requests that Administration Order No. MC-1515 be revised to the effect for authorization of triple completion of State of New Mexico "W" Well No. 1 located in Unit 2 of Section 30, Township 17 North, Range 12 East, NMEP, Lea County, New Mexico, in such a manner as to produce oil from the Vacuum Glaciere Pool, Vacuum Horns 2A Pool and Vacuum Horns 2B Pool through parallel strings of 2 1/2 inch casing cemented in a common well bore. These pools are located, instead of the Glaciere, Wolskamp and Horns 2A Pools, as provided for in Order No. MC-1515, due to the fact that the Glaciere Pool was not commercially productive during completion attempts. The Glaciere Pool was completed in the respective casing string in which completion attempts were conducted in the primary Pool.

Authorization for the triple completion of a well in the Glaciere, North 2A and Wolskamp pools was previously granted by the New Mexico Oil Conservation Commission in Order No. MC-1515. TRWACO Inc. respectfully requests that the Commission revise the diagrammatic sketch of the "W" Well No. 1 to show a separate casing string and bottom hole pressure test results. Electrical log survey was submitted
