BOUTHFAST NEW WEXICO PACKER LEAKAGE TEST INSTRUCTIONS

1. A packer leakage test shall be commenced on each multiply completed well within seven days after actual completion of the well, and annually thereafter as prescribed by the order authorizing the multiple completion. Such tests shall also be commenced on all multiple completions within seven days following recompletion and or chesteal or fracture treatment, and whenever remedial work has been done on a well during which the packer or the tubing have been disturbed. Tests also be taken at any time that communication is suspected or when requested by the Commission.

2. At least 72 hours prior to the commencement of any packer leakage leas, the operator shall notify the commission in writing of the exact time the test is to be commended. Offset operators shall also be so notified.

3. The parker leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized and for a minisum of two hours thereafter, provided however, that they need not remain shut-in more than 24 hours.

4. For Flow Twat No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shuf-in. Such test shall be continued until the flowing wellbead pressure has become stabilized and for a minimum of two hours thereafter, provided however, that the flow test need not continue for more than 24 hours. B. Following completion of Flow Test No. 1, the well shall sgain be shulin, in accordance with Duragraph B showe.

6. Flow Test No. 2 shall be conducted even though no lesk was indicated during Flow Test No. 1. Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1 except that the previously produced some shall remain shut-in while the previously shut-in some is produced.

7. All pressures, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges, the accuracy of which must be checked with a deadweight tester at least twice, once at the beginning and once at the end, of each flow test.

beginning and once at the end, of each flow feet. 8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the appropriate District Office of the New Moxico B1 Concervation Comminsion on Southeast New Moxico Excker Leakage frest form Revised L1-1-58, together with the original pressure recording gauge charts with all the deside light pressures shich were taken indicated thereon. In lieu of filing the aforewaid charts, the operator may construct a pressure versus changes which way be reflected by the gauge charts as will est il deadweight pressure readings which were taken. If the pressure versus changes which way be reflected by the gauge charts as will est all deadweight pressure readings which were taken. If the pressure turve is submitted, the original chart must be permanently filed in the operator's office. Form C-116 shall also accompany the Facker Leakage Test Form when the test period coincides with a gas-oil ratio test period.
