

8. TESTING, LOGGING AND CORING PROGRAMS:

Drill stem tests will be made when samples, drilling time and logging data are sufficient to indicate a possible pay zone.

It is planned that electric logs will include a CNL-FDC with Gamma Ray and Dual Laterlog.

No coring is planned.

9. ABNORMAL PRESSURES, TEMPERATURES OR HYDROGEN SULFIDE GAS:

None anticipated.

10. ANTICIPATED STARTING DATE:

It is planned that drilling operations may commence on or about September 10, 1980, with drilling and completion operations lasting about 120 days.
