If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

This well was returned to production on February 10, 1996. It is presently producing in a gas cap. It is our contention that if allowed to produce this well, the possibility of reducing the GOR is high. Since returning to production, the gas has steadily dropped. MOI did run a mechanical integrity test prior to commencing production. Please see attached chart.
