

MESCALERO RIDGE 35 UNIT #23  
SURFACE USE AND OPERATING PLAN  
PAGE 2

- D. The average grade will be approximately 1%.
- E. No cattle guards, grates or fence cuts will be required.
- F. No turnouts are planned.

3. Location of Existing Wells

Exhibit #4 shows all existing wells within a one-mile radius of the proposed Mescalero Ridge 35 Unit #23 .

4. Location of Existing and/or Proposed Facilities

- A. Devon Energy Corporation (Nevada) operates one production facility in this unit in Section 35. It is as follows:

two (2) heater treaters and tank battery

Water injection plant and two (2) water tanks (SW/4 NE/4)

- B. In the event the well is found productive, a flowline will be laid to the above tank battery. (refer to Exhibit #5).
- C. The well will be operated by means of an electric motor.
- D. If the well is productive, rehabilitation plans are as follows:
  - 1. The reserve pit will be back-filled after the contents of the pit are dry (within 120 days after completion, weather permitting).
  - 2. Caliche from unused portions of the drill pad will be removed. The original topsoil from the well site will be returned to the location. The drill site will then be contoured to the original natural state.
