

immediate location. The sign will inform the public that a hydrogen sulfide gas environment could be encountered be at the location.

#### **5. Mud Program**

- (a) The mud program has been designed to minimize the volume of H<sub>2</sub>S circulated to surface. Proper mud weight and safe drilling practices ( for example, keeping the hole filled during trips) will minimize hazards when drilling in H<sub>2</sub>S bearing formations.

#### **6. Metallurgy**

- (a) All drill strings, casings, tubing, wellhead, blowout preventers, drilling spools, kill lines, choke manifold and lines, and valves shall be suitable for H<sub>2</sub>S service.

#### **7. Communication**

- (a) Two way radio and cellular telephone communication will be available in company vehicles.

### **C. Diagram Of Drilling Location**

1. Attached is a diagram representing a typical location layout as well as the location of H<sub>2</sub>S monitors, briefing areas, and wind direction indicators.
