Well No. 1 is located 1980 ft. from N line and 660 ft. from W line of sec. 1  
~~XXXX~~  
NW 1/4 sec. 1 208 33E N.M.P.M.  
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
Wildcat Lea New Mexico  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is \_\_\_\_\_ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to cement 8-5/8" casing in top of the Rustler anhydrite at approximately 1400' with 50 sacks, preceded by heavy mud. Such casing as needed will be run through surface waters to prevent caving. These will be pulled prior to cementing the 8-5/8" which will be second hand 32# pipe.

We estimate that a pay may be encountered between the depths of 3350' and 3400'. In compliance with your request we will set and mud a string of 5 1/2" fourteen pound casing at a point near the top of pay and in the event commercial production of oil and/ or gas is obtained we will bridge above the pay section and cement the casing as requested by you.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
