June 24, 19 63

(Formerly Texaco Muse-Federal No. 1)
Brooks 7
 Well No. 6 is located 660 ft. from S line and 1926 ft. from Ex line of sec. 7
SW 1/4 Section 7 T-20-S R-33-E NMPM
 (1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Salt Lake Lee New Mexico
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3550 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well was originally drilled by the Texas Company as their No. 1 Muse-Federal and P & A on March 6, 1957. 20" casing was set @ 1193 and cemented w/2700 sacks, 13 3/8 @ 2734 and cement with 3000 sacks and circulated to surface. 9 5/8 set @ 8156 and cemented with 2500 sacks cement 2500 cft Stratocrete and 500 sack regular and cement circulated. 5 1/2 was set @ 10,758 and cemented with 500 sacks subsequently back off @ 8136 and P & A.

I propose to reenter this well by drilling out the cement plugs and two CIBP set at 2600 and 1250. Clean the well out to 5,000 feet and perforate and test separately scattered zones of porosity until economic production is obtained. In the event I am not successful the well will be plugged and abandoned in accordance with OCC Order R-111-A.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
