The elevation of the derrick floor above sea level is 3635 ft

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Our "Notice of Intention to Drill" this well indicated that we expected to encounter productive oil or gas at approximately 3650' and would set and cement 7" casing at the top of the pay with 150 sacks. We did not encounter any pay at that depth and have carried this well to a depth of 3805', encountering sulphur water from 3770' to 3775' with a probable increase on down to 3800'. We now desire permission to carry this well to the Artesia Red Sand, which we anticipate will be at approximately 4600', and since we did not encounter the originally anticipated pay, we desire approval to mud our 7" casing at approximately our present depth, as we may wish to carry this casing string to a deeper depth and cement it if commercial production is found in the Artesia Red Sand. The above confirms verbal approval from your office on September 12, 1944.

| I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced. | | | |
