## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a 1" above location with cable tools to a depth of 3750 feet in Seven Rivers. 13 3/8" casing will be cemented to 70 feet. 8 5/8" casing will be set at approximately 1550 feet in Anhydrite and cemented to surface. 7" casing will be set through base of the salt section to each cement. If productive, 7" casing will be pulled, 5 1/2" casing will be set to the top of Seven Rivers and cemented to base of 8 5/8" casing.

- \* Subject to the U.S.G.S. being notified in sufficient time to witness all cementing operations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
