

It is recommended that the State KN-12 No. 1 be plugged and abandoned since the well is incapable of further production from the Eumont gas zone and is now shut in. Remedial or recompletion work cannot be economically justified and the well is not needed for salt water disposal or injection purposes.

Initial Completion Data

Location: 660' FSL & FEL, Section 12, T19S, R36E,  
Lea County, New Mexico

Drilling Commenced: December 17, 1952

Date Completed: February 13, 1953

T.D. 4170'

PBTD: 3826' (Top of Calseal Plug)

Elevation: 3733' - Ground level

Casing: (1) 9 5/8" OD, 36#/ft., set at 295' with 200 sacks in  
12 1/2" hole.  
(2) 7" O.D., 20#/ft. set at 3490' (casing shoe) with  
400 sacks in 8 3/4" hole

Tubing: 2 3/8" O.D., 4.7#/ft., set at 3800'

Producing Interval: 3650-3826' (effective net pay - 50')

Formation: Queen (Penrose)

Initial Treatment: Hydrofrac with 2000 gallons. February 10, 1953

I. P. 3125 MCF/D CAOF

Plug back: (Initiated 2-1-53, completed 2-5-53) Heavy mud from T.D.  
of 4170 to 3850'. Baker bridge plug (30" long) set at  
3848'. Calseal plug from 3848' to 3826' (PBTD)
