

THE TEXAS COMPANY'S STATE OF NEW MEXICO  
"J" WELL NO. 2 - LEA COUNTY, NEW  
MEXICO

---

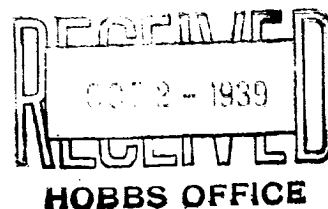

DUPLICATE

On 8-23-39 plugged well back, using Company clean-out machine and tools from 4043' to 4033' with 3 sacks Starcor Cement to shut off water. However, on going back in hole on 8-25-39 depth was found to be 4029'. 2½" tubing was run 10' off bottom and well swabbed in and in first 16 hours flowed 26.76 barrels fluid, 50% BS&W. Next 24 hours well flowed 15 barrels oil plus 60% BS&W.

Well was tested until 9-12-39 at which time tubing was pulled and on 9-13-39 dumped 2 sacks Starcor Cement.

On 9-15-39 top of plug was found to be 4021' and 3987' of 2½" tubing was run. On 9-16-39 well was swabbed in and flowed 9.52 barrels fluid 21 hours 61% BS&W.

Well was tested to 9-22-39 at which time plug back job was considered completed at total depth of 4021' with initial production of 26 barrels oil flowing through tubing 17 hours plus 50% BS&W with gas 960,000 cubic feet per 24 hours. Gas Oil Ratio 26,144.

OIL & GAS INSPECTOR

THE TEXAS COMMISSION ON OIL AND GAS  
 "THE WELL NO. 1 - THE COUNTY, TEXAS"  
 OIL AND GAS

WELL NO. 1

On 8-28-39 pumped well back, using Company electric  
 machine and took from 4000' to 4050', with 8 inches of water  
 went to shut off water. However, on going back in hole on 8-28-39  
 depth was found to be 4020'. 2 1/2" tubing was run off bottom  
 and well swabbed in and in first 18 hours showed 25.78 barrels  
 fluid, 50% H&W. Next 24 hours well flowed 25 barrels oil and  
 50% H&W.

Well was tested until 9-13-39  
 failed and on 9-13-39 showed 8 inches of water.

On 9-13-39 200' of pipe was found to be 4010' and 200' of  
 2 1/2" tubing was run. On 9-13-39 well was swabbed in and showed  
 25.78 barrels fluid 21 hours 81% H&W.

Well was tested to 9-22-39 at which time well back 100'  
 was considered completed at total depth of 4010' and initial  
 production of 26 barrels oil flowing through tubing 17 hours  
 plus 50% H&W with gas 350,000 cubic feet per 24 hours. Gas oil  
 ratio 28,144.
