

NEW MEXICO OIL CONSERVATION COMMISSION
Santa Fe, New Mexico

MISCELLANEOUS REPORTS ON WELLS

Submit this report in triplicate to the Oil Conservation Commission or its proper agent within ten days after the work specified is completed. It should be signed and sworn to before a notary public for reports on beginning drilling operations, results of shooting well, results of test of casing shut-off, result of plugging of well, and other important operations, even though the work was witnessed by an agent of the Commission. Reports on minor operations need not be signed and sworn to before a notary public. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of report by checking below:

REPORT ON BEGINNING DRILLING OPERATIONS		REPORT ON REPAIRING WELL	
REPORT ON RESULT OF SHOOTING OR CHEMICAL TREATMENT OF WELL		REPORT ON PULLING OR OTHERWISE ALTERING CASING	
REPORT ON RESULT OF TEST OF CASING SHUT-OFF	X	REPORT ON DEEPENING WELL	
REPORT ON RESULT OF PLUGGING OF WELL

Date

OIL CONSERVATION COMMISSION,
 Santa Fe, New Mexico.

Gentlemen:

Following is a report on the work done and the results obtained under the heading noted above at the _____

Amerada Petroleum Corporation Weir Well No. 1 in the _____
 Company or Operator Lease
SW 1/4 SW 1/4 of Sec. 35, T. 19, R. 36, N. M. P. M.,
Monument Field, Lea County.

The dates of this work were as follows: _____

Notice of intention to do the work was ~~submitted~~ submitted on Form C-102 on January 18, 1936 19____
 and approval of the proposed plan was [was not] obtained. (Cross out incorrect words.)

DETAILED ACCOUNT OF WORK DONE AND RESULTS OBTAINED

7" 24# 10-thd. New Seamless pipe was set in this well at 3815' and cemented by the Halliburton method with 100 sacks cement.

Casing and fittings were tested by applying 1200# pump pressure and allowed to stand undisturbed for thirty minutes. No drop in pressure resulted. Cement plug was then drilled out of casing and the same test again applied and allowed to stand undisturbed for thirty minutes. No drop in pressure resulted.

Witnessed by W.R.Hines Two States Drilling Co. Tool Pusher

In an *ad hoc* manner using a modified *ad hoc* (AHT) algorithm, we study the \mathcal{H}_0 and \mathcal{H}_1 hypothesis testing problem concerning whether or not the input is a Gaussian signal. We show that the proposed algorithm achieves a better performance than the conventional Gaussian likelihood ratio test (GLRT) in terms of the detection probability for a given false alarm rate. The proposed algorithm is also compared with the GLRT and the AHT algorithm. The results show that the proposed algorithm outperforms the other two algorithms.
