

NEW MEXICO OIL CONSERVATION COMMISSION

Santa Fe, New Mexico

MISCELLANEOUS REPORTS ON WELLS

Submit this report in triplicate to the Oil Conservation Commission or its proper agent within ten days after the work specified is completed. It should be signed and sworn to before a notary public for reports on beginning drilling operations, results of shooting well, results of test of casing shut-off, result of plugging of well, and other important operations, even though the work was witnessed by an agent of the Commission. Reports on minor operations need not be signed and sworn to before a notary public. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of report by checking below:

REPORT ON BEGINNING DRILLING OPERATIONS	X	REPORT ON REPAIRING WELL	
REPORT ON RESULT OF SHOOTING OR CHEMICAL TREATMENT OF WELL		REPORT ON PULLING OR OTHERWISE ALTERING CASING	
REPORT ON RESULT OF TEST OF CASING SHUT-OFF		REPORT ON DEEPENING WELL	
REPORT ON RESULT OF PLUGGING OF WELL			

Monument, New MexicoMarch 2, 1937

Date

OIL CONSERVATION COMMISSION,
SANTA FE, NEW MEXICO.

Gentlemen:

Following is a report on the work done and the results obtained under the heading noted above at the _____
Amerada Petroleum Corporation W.P. Byrd Well No. 5 in the _____
 _____ Company or Operator _____ Lease _____
Sec 1 NW 1/4 of Sec. 12, T. 20, R. 36, N. M. P. M.,
Monument Field, Lea County.

The dates of this work were as follows: _____

Notice of intention to do the work was ~~was not~~ submitted on Form C-102 on February 6, 1937 19____
 and approval of the proposed plan was ~~was not~~ obtained. (Cross out incorrect words.)

DETAILED ACCOUNT OF WORK DONE AND RESULTS OBTAINED

Drilling started on this well on March 2, 1937

DUPLICATE

Witnessed by Ira French Rowan Drilling Co. Tool-pusher

 Title

Mathematical Analysis of the Problem

Mathematical Analysis of the Problem

Mathematical Analysis of the Problem

The first step in the analysis is to identify the variables and parameters involved in the problem. These include the independent variables, the dependent variables, and the parameters that define the system. The next step is to formulate the problem as a set of equations or inequalities that describe the relationships between these variables and parameters.

The third step is to solve the equations or inequalities. This can be done using a variety of methods, including analytical methods, numerical methods, and graphical methods. The final step is to interpret the results of the analysis and draw conclusions about the problem.

The fourth step is to validate the results of the analysis. This can be done by comparing the results with known results or by performing sensitivity analysis. The final step is to present the results of the analysis in a clear and concise manner.

The fifth step is to discuss the implications of the results of the analysis. This can be done by comparing the results with known results or by performing sensitivity analysis. The final step is to present the results of the analysis in a clear and concise manner.
