Monument, New Mexico

Place

April 11, 1937

Date

OIL CONSERVATION COMMISSION,
Santa Fe, New Mexico.

Gentlemen:

Following is a notice of intention to do certain work as described below at the _____

Amerada Petroleum Corporation

Company or Operator

Byrd "A"

Lease

Well No. 1 in NE 1/4 SW 1/4of Sec. 12, T. 20, R. 36, N. M. P. M., Monument Field,Lea County.

FULL DETAILS OF PROPOSED PLAN OF WORK

FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

6-5/8" 20# 10-Thd. New Seamless casing was set in this well at 3799' and cemented by the Halliburton Method with 100 sacks.

Casing and fittings will be tested with 1200# pump pressure and allowed to stand undisturbed for thirty minutes. If no drop in pressure results the cement will then be drilled out of the casing and the same test of 1200# pump pressure will again be applied and allowed to stand undisturbed for thirty minutes. If no drop in pressure results the drilling will then be resumed.

DUPLICATE

THEORY OF THE EARTH AND ITS HISTORY

BY J. H. MACLEOD

WITH ILLUSTRATIONS BY J. H. MACLEOD

This book is a comprehensive treatise on the theory of the earth and its history. It covers the origin of the earth, the development of life, and the changes in the earth's surface. The author, J. H. Macleod, is a distinguished geologist and has written several other books on the subject. The book is written in a clear and concise style, and is suitable for both students and general readers. It is a valuable addition to any library of books on the earth and its history.

The book is divided into two main parts. The first part deals with the origin of the earth and the development of life. The second part deals with the changes in the earth's surface.

The first part of the book deals with the origin of the earth and the development of life. It begins with a discussion of the origin of the earth, and then goes on to discuss the development of life. The author discusses the various theories of the origin of life, and then presents his own theory. He argues that life originated in the sea, and that it developed from simple organic molecules to the complex organisms that we see today. The second part of the book deals with the changes in the earth's surface. It begins with a discussion of the earth's crust, and then goes on to discuss the various processes that have shaped the earth's surface. The author discusses the theory of plate tectonics, and then presents his own theory. He argues that the earth's surface is shaped by the movement of the plates, and that the various features of the earth's surface are the result of these movements.

The book is written in a clear and concise style, and is suitable for both students and general readers. It is a valuable addition to any library of books on the earth and its history.
