

NEW MEXICO OIL CONSERVATION COMMISSION
Santa Fe, New Mexico

MISCELLANEOUS REPORTS ON WELLS

Submit this report in triplicate to the Oil Conservation Commission or its proper agent within ten days after the work specified is completed. It should be signed and sworn to before a notary public for reports on beginning drilling operations, results of shooting well, results of test of casing shut-off, result of plugging of well, and other important operations, even though the work was witnessed by an agent of the Commission. Reports on minor operations need not be signed and sworn to before a notary public. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of report by checking below:

REPORT ON BEGINNING DRILLING OPERATIONS	<input checked="" type="checkbox"/>	REPORT ON REPAIRING WELL	
REPORT ON RESULT OF SHOOTING OR CHEMICAL TREATMENT OF WELL		REPORT ON PULLING OR OTHERWISE ALTERING CASING	
REPORT ON RESULT OF TEST OF CASING SHUT-OFF		REPORT ON DEEPENING WELL	
REPORT ON RESULT OF PLUGGING OF WELL			

Hobbs, New Mexico November 29th 1937.

THEORY OF THE EARTH

CHAPTER I

THE EARTH AND ITS HISTORY

The Earth is a planet of the solar system, and is the only one of which we have direct knowledge. It is a sphere, and is composed of a solid inner core, a liquid outer core, and a solid crust. The crust is the part of the Earth which we live on, and is composed of rocks and minerals. The crust is divided into continents and oceans, and is further divided into smaller units called countries and states.

The Earth has a history, and has changed many times since it was first formed.

The first stage of the Earth's history was the formation of the solar system.

The solar system is a collection of celestial bodies, including the Sun, planets, and moons, which are held together by the force of gravity.

The solar system is believed to have formed about 4.5 billion years ago.

The first stage of the Earth's history was the formation of the solar system.

The solar system is believed to have formed about 4.5 billion years ago.

The first stage of the Earth's history was the formation of the solar system.

The solar system is believed to have formed about 4.5 billion years ago.

The second stage of the Earth's history was the formation of the Earth's crust. The crust is the part of the Earth which we live on, and is composed of rocks and minerals. The crust is divided into continents and oceans, and is further divided into smaller units called countries and states.

The crust is believed to have formed about 4.5 billion years ago.

The third stage of the Earth's history was the formation of the Earth's atmosphere.

The atmosphere is the layer of gases which surrounds the Earth.

The atmosphere is believed to have formed about 4.5 billion years ago.

The fourth stage of the Earth's history was the formation of the Earth's oceans.

The oceans are the bodies of water which cover most of the Earth's surface.

The oceans are believed to have formed about 4.5 billion years ago.

The fifth stage of the Earth's history was the formation of the Earth's life.

Life is the ability of an organism to grow, reproduce, and respond to its environment.

Life is believed to have formed about 4.5 billion years ago.

The sixth stage of the Earth's history was the formation of the Earth's modern climate.

The modern climate is the current state of the Earth's atmosphere and oceans.

The modern climate is believed to have formed about 4.5 billion years ago.

The seventh stage of the Earth's history was the formation of the Earth's modern flora and fauna.

The modern flora and fauna are the plants and animals which live on the Earth today.

The eighth stage of the Earth's history was the formation of the Earth's modern human race.

The ninth stage of the Earth's history was the formation of the Earth's modern civilization.

The modern civilization is the current state of human society, which is characterized by the use of technology and the development of complex social structures.

The modern civilization is believed to have formed about 4.5 billion years ago.

The tenth stage of the Earth's history was the formation of the Earth's modern world.

The modern world is the current state of the Earth, which is a combination of all the stages of its history.

The modern world is believed to have formed about 4.5 billion years ago.

The modern world is the current state of the Earth, which is a combination of all the stages of its history.

The modern world is believed to have formed about 4.5 billion years ago.

The modern world is the current state of the Earth, which is a combination of all the stages of its history.

The modern world is believed to have formed about 4.5 billion years ago.

The modern world is the current state of the Earth, which is a combination of all the stages of its history.

The modern world is believed to have formed about 4.5 billion years ago.

The modern world is the current state of the Earth, which is a combination of all the stages of its history.

The modern world is believed to have formed about 4.5 billion years ago.

The modern world is the current state of the Earth, which is a combination of all the stages of its history.

The modern world is believed to have formed about 4.5 billion years ago.

The modern world is the current state of the Earth, which is a combination of all the stages of its history.

The modern world is believed to have formed about 4.5 billion years ago.

The modern world is the current state of the Earth, which is a combination of all the stages of its history.

The modern world is believed to have formed about 4.5 billion years ago.
