RE: Non-Standard Gas Spacing and Proration
Unit for the Eumont Gas Com 3 Well No.
1, A-35-T20S-R36E, Lea County, New
Mexico.

Dear Mr. Murray:

After an extensive review of this application I find that each of the Eumont wells in the NE/4 of Section 35 have the following producing intervals:

Well No. 1	(Unit A)	perf.	3575 - 3713	(proposed 120
		OH	3713 - 3788	acre gas unit)
Well No. 8	(Unit B)	perf.	3800 - 3828	(40 acre oil unit)
Well No. 7	(Unit G)	perf.	3790 - 3802	(40 acre oil unit)
Well No. 2	(Unit H)	OH	3704 - 3860	(40 acre oil unit)

It therefore appears that Well Nos. 1 and 2 have overlapping producing intervals, as do Wells Nos. 2, 7 and 8. The policy of the NMOCD is to disallow the simultaneous dedication of oil wells and gas wells in any pool. At this time I can not approve this application; therefore, please submit either an amended application for a 40-acre non-standard gas proration unit for your No. 1 well or submit additional data to support this application.

Sincerely,

Michael E. Stogner
Engineer
