1. The first step in the process of identifying a problem is to determine the scope of the problem. This involves identifying the specific area of concern and the individuals or groups affected by the problem. Once the scope is established, the next step is to gather information about the problem. This can be done through interviews, surveys, or other methods of data collection. The information gathered should be analyzed to identify the underlying causes of the problem and to determine the best course of action to address the problem. Finally, the results of the analysis should be communicated to the relevant stakeholders and used to develop a plan of action to address the problem.
