

## OIL CONSERVATION COMMISSION

Santa Fe, New Mexico

## MISCELLANEOUS REPORTS ON WELLS

Submit this report in triplicate to the Oil Conservation Commission or its proper agent within ten days after the work specified is completed. It should be signed and sworn to before a notary public for reports on beginning drilling operations, results of shooting well, results of test of casing shut-off, result of plugging of well, and other important operations, even though the work was witnessed by an agent of the Commission. Reports on minor operations need not be signed and sworn to before a notary public. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of report by checking below:

REPORT ON BEGINNING DRILLING OPERATIONS		REPORT ON REPAIRING WELL	
REPORT ON RESULT OF SHOOTING OR CHEMICAL TREATMENT OF WELL		REPORT ON PULLING OR OTHERWISE ALTERING CASING	
REPORT ON RESULT OF TEST OF CASING SHUT-OFF		REPORT ON DEEPENING WELL	
REPORT ON RESULT OF PLUGGING OF WELL		Set Production Packer	XX

Date

OIL CONSERVATION COMMISSION,  
SANTA FE, NEW MEXICO.

Gentlemen:

Following is a report on the work done and the results obtained under the heading noted above at the

Gulf Oil Corporation F. W. Kutter "B" Well No. 2 in the  
Company or Operator Lease  
C. SW NW of Sec. 28, T. 19 S, R. 37 E, N. M. P. M.,  
Monument Field, Lea County.

The dates of this work were as follows: Jan. 26th to Feb. 2nd, 1946

Notice of intention to do the work was (was not) submitted on Form C-102 on \_\_\_\_\_ 19\_\_\_\_  
and approval of the proposed plan was (was not) obtained. (Cross out incorrect words.)

## DETAILED ACCOUNT OF WORK DONE AND RESULTS OBTAINED

Pulled and reran 2-3/8" OD tubing with 5-1/2" OD Lane Wells production type packer set at 3695', tubing set at 3940' with regular 6' anchor joint on bottom. Well had required considerable swabbing, and the packer was set in order to prolong the natural flow of the well.

Production before: 10 bbl. oil and 8 bbl. water.

Production after: On Feb. 1, 1946, flowed 26 bbl. oil and 10 bbl. water through 1/2" choke. Prior to setting packer, well required frequent swabbing.

1. The first step in the process of developing a new product is to identify a market need. This is often done through market research, which can involve surveys, focus groups, and other methods of gathering information about consumer preferences and behaviors. Once a market need has been identified, the next step is to develop a concept for a product that addresses that need. This concept should be based on a clear understanding of the target market and the unique value proposition that the product will offer. The concept should also take into account the competitive landscape and the company's resources and capabilities. Once the concept has been developed, the next step is to create a prototype of the product. This can be done through a variety of methods, including 3D printing, computer-aided design (CAD), and other manufacturing techniques. The prototype should be used to test the product's functionality, usability, and appeal to the target market. Once the prototype has been tested and refined, the next step is to develop a business plan for the product. This plan should outline the company's goals, marketing strategy, and financial projections. It should also include a detailed description of the product and its unique value proposition. Once the business plan has been developed, the next step is to secure funding for the product. This can be done through a variety of methods, including venture capital, angel investors, and crowdfunding. Once funding has been secured, the next step is to manufacture the product. This can be done through a variety of methods, including contract manufacturing, in-house manufacturing, and other production techniques. Once the product has been manufactured, the next step is to launch the product into the market. This can be done through a variety of methods, including direct sales, retail partnerships, and other distribution channels. Finally, the company should monitor the product's performance in the market and make adjustments as needed to ensure its long-term success.
