All pressures, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges. The pressure which must be checked with a deadweight tester at the beginning and end of each flow test.

The results of the above-described tests, which were completed within 15 days after completion of the test, appear as follows: (1) the appropriate District Office of the New Mexico State Police, Division on Southeast New Mexico (Packer Roadway) was furnished with the original pressure recording gauge charts, together with the original pressure recording gauge charts, and the roadweight pressures which were taken indicated pressure readings of 10,000 lbs. for the original charts, the original pressure readings of 10,000 lbs. for each mile of each test, indicating that the pressure readings which may be reflected by the gauge charts are well within the range of pressure readings which are taken for the original charts. (2) The pressure readings indicated the original charts to be permanently fixed in the District Office. Form 1111 shall be so permanently fixed in the District Office. The test period indicated in the original charts shall be

then the last period will be the greatest. This is the case.
