| <b>Abandon San Andres - Restore Production in Queen Sand</b> |  |

(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

January 21, 1962

Well No. **2** is located **1980** ft. from **N** line and **1930** ft. from **E** line of sec. **6**  
**NE 1/4 SW 1/4 Sec. 6** **20-8** **37-E** **N.16.P.M.**  
 (1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
**Fuscut** **Lea County** **New Mexico**  
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is **3582** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The Queen Gas Zone was being produced through the 7" - 9-5/8" annulus with the San Andres through the 7" casing. However, the Queen Gas Zone is loaded with water and will not flow through the 7" - 9-5/8" annulus. In order to restore Queen Gas production, we propose to abandon the San Andres and place the Queen Zone into the 7" casing as follows:

Set a Baker Model "K" Bridging Plug at 3300' w/1 sack cement, Perforate 7" CD Casing @ 3175-96', 3215-35' w/2 holes per foot, Treat and test Queen Zone.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
