The elevation of the derrick floor above sea level is 7 ft.

## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is proposed to drill a well with Rotary tools to a depth of 5250. All casing joints will be cemented or mudded in accordance with U.S.G.S. Regulations, to prevent infiltration of waters to other strata. The following casing will be run:

13 3/8 OD casing set to approx 600' and cemented to surface.

9 5/8 or 8 5/8 OD casing set to approx 1300' and cemented to surface.

7 or 5 1/2 OD casing set to approx 5250' and cemented with 600 sacks.

If any change is made in above, you will <sup>be</sup> notified.

All casing will be cemented by Pallitturton process.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
