FULL DETAILS OF PROPOSED PLAN OF WORK

FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

Terry NW-9 #8:

Terry NW-9 #8. TD 4192. 8 5/8" Casing set at 3999. Recently tubing was pulled, but packer which was set at 4133 was left in hole. Production from well has declined to 3 BOPD plus 175 BOPD pumping. It is proposed to wash over packer and recover junk from hole. A 5 1/2" liner will then be cemented from 4192 to 3951. After waiting 48 hours liner will be tested and well deepened to 4205. Open hole below liner will be tested and well completed here if possible. If a satisfactory completion can not be made, oil sections opposite liner will be perforated and acidized.
